# 人工智能实践: Tensorflow笔记

曹健

北京大学

软件与微电子学院

本讲目标: 使用八股搭建神经网络

- •神经网络搭建八股
- •iris代码复现
- MNIST数据集 手写数字识别数据集
- •训练MNIST数据集
- Fashion数据集 训练衣服、裤子等图片的识别模型

# 用Tensorflow API: tf.keras搭建网络八股

六步法

import

train, test

model = tf.keras.models.Sequential

model.compile

model.fit

model.summary

## model = tf.keras.models.Sequential ([ 网络结构 ]) #描述各层网络

网络结构举例:

拉直层: tf.keras.layers.Flatten()

全连接层: tf.keras.layers.Dense(神经元个数, activation= "激活函数", kernel\_regularizer=哪种正则化)

activation(字符串给出)可选: relu、 softmax、 sigmoid 、 tanh kernel\_regularizer可选: tf.keras.regularizers.l1()、tf.keras.regularizers.l2()

卷积层: tf.keras.layers.Conv2D(filters = 卷积核个数, kernel\_size = 卷积核尺寸, strides = 卷积步长, padding = " valid" or "same")

LSTM层: tf.keras.layers.LSTM()

model.compile(optimizer = 优化器,

loss = 损失函数

metrics = ["准确率"])

#### Optimizer可选:

'sgd' or tf.keras.optimizers.SGD (Ir=学习率,momentum=动量参数)

'adagrad' or tf.keras.optimizers.Adagrad (lr=学习率)

'adadelta' or tf.keras.optimizers.Adadelta (Ir=学习率)

'adam' or tf.keras.optimizers.Adam (Ir=学习率, beta\_1=0.9, beta\_2=0.999)

### loss可选:

'mse' or tf.keras.losses.MeanSquaredError()

'sparse\_categorical\_crossentropy' or tf.keras.losses.SparseCategoricalCrossentropy(from\_logits=False)

#### Metrics可选:

'accuracy': y\_和y都是数值,如y\_=[1] y=[1]

'categorical\_accuracy': y\_和y都是独热码(概率分布),如y\_=[0,1,0] y=[0.256,0.695,0.048]

'sparse\_categorical\_accuracy': y\_是数值,y是独热码(概率分布),如y\_=[1] y=[0.256,0.695,0.048]

model.fit (训练集的输入特征,训练集的标签,

batch\_size=, epochs=,
validation\_data=(测试集的输入特征,测试集的标签),
validation\_split=从训练集划分多少比例给测试集,
validation\_freq = 多少次epoch测试一次)

## model.summary ()

```
import tensorflow as tf
 import
                     from sklearn import datasets
                                                                              源码: p8_iris_sequential.py
                     import numpy as np
                  4
                     x train = datasets.load iris().data
train test
                     y train = datasets.load iris().target
                     np.random.seed (116)
                     np.random.shuffle(x train)
                     np.random.seed(116)
                11
                     np.random.shuffle(y train)
                     tf.random.set seed (116)
                    ■model = tf.keras.models.Sequential([
                         tf.keras.layers.Dense(3, activation='softmax', kernel regularizer=tf.keras.regularizers.12())
                    1)
nodels.Sequential
                    model.compile(optimizer=tf.keras.optimizers.SGD(lr=0.1),
model.compile
                                   loss=tf.keras.losses.SparseCategoricalCrossentropy(from logits=False),
                 19
                 20
                                   metrics=['sparse categorical accuracy'])
                21
                     model.fit(x train, y train, batch size=32, epochs=500, validation split=0.2, validation freq=20)
model.fit
                23
model.summary
                24
                    model.summary()
```

# 用Tensorflow API: tf.keras搭建网络八股

六步法

import

train, test

class MyModel(Model) model=MyModel

model.compile

model.fit

model.summary

# 

call()

写出前向传播

```
class IrisModel(Model):
class MyModel(Model):
                                      def init (self):
  def init (self):
                                          super(IrisModel, self). init ()
     super(MyModel, self).__init__()
                                          self.d1 = Dense(3)
    定义网络结构块
                                      def call(self, x):
  def call(self, x):
                                          y = self.dl(x)
     调用网络结构块, 实现前向传播
                                          return y
    return y
model = MyModel()
                                   model = IrisModel()
    init () 定义所需网络结构块
```

```
import tensorflow as tf
                      from tensorflow.keras.layers import Dense
                      from tensorflow.keras import Model
import
